SCAL-D / SCAL-N

Data Management Software for use with SMART-CAL™ & SCal-100 Calibration Stations

SCal is the Data Management Software used to download data from Calibration Stations.

Various reports and alerts can be viewed, printed, emailed or stored as an Excel spreadsheet. When configured it will automatically alert operators and supervisors of important data depending on their preference. SCal provides an easy to use interface and content sensitive help with FAQ's for quick response.

SCal-D is the Desktop version of the software. This single-user software application comes standard with Calibration Stations.

SCal-N is the Network version of the software. SCal-N is sold separately with a multi-year license. Use SCal-N to download data from remotely located Calibration Station(s). Data is stored in SQL Server.

SCal-N is divided into two categories:

Admin Application:

The Admin application is the host for the automatic downloading of remote Calibration Stations that have the proper communication hardware installed. This program is SQL Server based. You must install and use only one copy of SCal-N as Admin.

User Application:

The User Application allows viewing of selected data stored in the Server database from any computer that has access or privileges. An authorized login and password to the SQL Server is required for each User application installed.
